Abstract

Effect of neem leaf extract used as soil amendment and a chemical nematicide, ethoprop, singly and in combination on root-knot nematode, Meloidogyne incognita and growth of sugarcane was investigated. Neem extract amendment alone considerably suppressed root-knot development. Neem extract in combination with ethoprop at the rate of 2 to 4 kg a.i./ha were as effective as ethoprop alone at the rate of 5 to 8 kg a.i./ha. Neem extract amendment was not toxic to sugarcane. The different treatments improved plant growth of sugarcane.
