

**ROLE OF UNDI OIL SEED CAKE FOR THE MANAGEMENT OF DISEASE  
COMPLEX CAUSED BY *FUSARIUM SOLANI* AND  
*MELOIDOGYNE INCOGNITA* ON BRINJAL**

**Abstract**

During a survey of vegetable field carried out around New Delhi in August 1999, a severe infestation of *Meloidogyne incognita* root – knot nematode in association with a fungus *Fusarium solani* on brinjal was observed. For the control of the disease complex non-edible oil seed cake of undi (*Calophyllum inophyllum*) was used. Brinjal plants grew well in undi amended soil as compared with carbofuran treatment. Both the treatments reduced nematode population in soil.
