**AGLENCHUS MARDANENSIS n.sp. A NEW NEMATODE SPECIES
(TYLENCHINAE) FROM PAKISTAN**

M.A. MAQBOOL, F. SHAHINA AND B. ZARINA

*National Nematological Research Centre,
University of Karachi, Karachi-32, Pakistan*

Abstract

Specimens of *A. mardanensis* n.sp. found around the roots of sugarcane (*Saccharum officinarum*) from Mardan, Pakistan are described and illustrated. This new species comes close to *A. agricola* (de Man, 1884) Meyl, 1961 and *A. fragariae* Szczygiel, 1969 but differs from them in some respects. A key to the species of *Aglenchus* is also given.
