**Abstract**

*Cephalobus sacchari* n. sp. collected from soil around the roots of sugarcane fields in Sindh, Pakistan, is described and illustrated. It comes close to *Cephalobus persignis* Bastian, 1865 but differs from it by having short body and stoma length; small V %; greater spicule length and long tail. *C. nanus* de Man, 1880; is reported for the first time from Pakistan.
