Abstract

In replicated pot experiments susceptibility of resistance of 20 rice cultivars to *Meloidogyne incognita* was studied. No cultivar was completely immune to *M. incognita*, Thabaung Mee Gauk was most resistant, followed by IAC 1246. Manoharsali, IR 36, RD6 Latisali, Hanan-ka, Lebonnet and IT 2061-465-1-5-5 showed slight resistance while Belle Patna, Chianung 242 and Faro II were most susceptible.
