**Abstract**

*Tylenchorhynchus swatiensis* n. sp. is described and illustrated from specimens on *Prunus ameniaca* from Swat, Pakistan. This new species can be distinguished from all other species of the genus *Tylenchorhynchus* on the basis of a combination of the characteristic, smaller body length, completely set off cephalic region, smaller stylet length, areolated lateral field with three lines, presence of single epiptygma, and smaller spicules and gubernaculum.
