Abstract

Eleven species of fungi viz., *Aspergillus awamori*, *A. janus*, *A. restrictus*, *Fusarium dimerum*, *F. moniliforme*, *F. pallidoroseum*, *F. solani*, *Paecilomyces varioti*, *Rhizoctonia solani*, *Rhizoctonia* sp., and *Verticillium chlamydosporium* were isolated from eggs and/or females of *Meloidogyne javanica* root-knot nematode. Pathogenicity test showed that all the isolated fungi parasitized the eggs of root-knot nematode.
