**Abstract**

Original descriptions of 141 species of the genus *Aphelenchoides* were collated in order to construct a compendium of the genus, based on body, stylet, tail and spicula length, a, b, c, c' and V values. A list and illustrations of species of the genus, which have been divided into four groups on the basis of tail terminus shape, are also given. Specimens of four known species viz., *Aphelenchoides aligarhiensis* Siddiqi *et al.*, 1967, *A. involutus* Minegawa, 1992 *Seinura nagini* Husain & Khan, 1965; and *S. oostenbrinki* Husain & Khan, 1967; are reported from different area of Pakistan.
